Addition

This text is being proposed to be added to the 2018 International Code for adoption by local municipalities.

Provide your new proposed code to be added to the existing code as cited above. *

Justification for Proposal

Provide reason to support your proposal based on the safety impact, enfforceability, cost effectiveness, or unique location conditions

Justification *

Common design and construction practice is the application of exterior and interior wall sheathings and tie-downs to accommodate wind-resistance for framed structures. Fasteners for these elements are often not able to be visually field verified by inspection personnel prior to installation and are not readily accessible from grade plane. This provision will provide for special inspection of these elements accordingly
